ARMOUR SPILL
PROTECTION

Armour Protection Board – Green HD is a High Density 5mm thick plastic sheet product with a honeycomb like core that can handle extreme impact. It comes standard with a fleece backing applied to the underside for added soft non-abrasive protection to avoid scratches and scuffs on finished surfaces. With a slip resistant surface, it is commonly used to protect floors in high traffic areas for long periods of time, against lifts, carts, and other heavy duty jobsite traffic. Often used as an alternative to plywood and hardboard since it's durable, highly reusable, UV resistant for exterior applications, and simple to install and seam together. It is lightweight, water-proof, impact resistant, and it lays flat.

Commonly used in conjunction with Armour Tape.
